HUSHFRAME®

Raft® Connectors

VIBRATION ISOLATING STRUCTURAL CONNECTORS
For controlling the movement of sound through walls, floor/ceiling assemblies,
and associated components of buildings.

Typical recommended Raft connector spacing for 16" o.c., and 24" o.c.
wood framed wall and floor/ceiling assembly construction.

HushFrame Rafts have silicone rubber cores that trap sound waves as they transit thru the superstructure. The waves bog down and dissipate as a small measure of heat, never reaching the opposing assembly surface.

Proudly made in the USA
