

# QUIETBOX BY ISOSTORE

[RECESSED LIGHT AND SPEAKER ISOLATION]

The only real solution to isolating recessed lights or in-ceiling speakers on the market today. Use of the QuietBox to restore the mass lost by your recessed lights or in-ceiling speakers will allow you to achieve your expected STC and IIC ceiling assembly performance without changing your lighting or speakers.

## GENERAL INFORMATION

Installing recessed lighting and/or in-ceiling speakers in your ceiling assembly is like having Swiss cheese for a ceiling! You will lose an estimated 1-2 STC points per opening. This might not make a huge difference for a couple openings, but with enough lights in your ceiling, you will easily hear your neighbors above. The QuietBox is the **ONLY** solution on the market that truly works.

Other solutions are insulation based and do not create a tight seal to the drywall. These solutions do not work because you have not lost insulation by installing lights or in-ceiling speakers, you have lost mass!

The QuietBox surrounds the light housing or in-ceiling speaker entirely and comes in full contact with the back of the drywall. A very simple design and solution with amazing results.

### 1 Quality Product

We hand build each QuietBox here at IsoStore in our shop. Built using 3/4" MDF, 5/8" Type-X drywall, Green Glue Compound, and Acoustical Sealant. Each unit is built with care to ensure it performs as advertised in your project!

### 2 Readily Available

We keep a large of inventory of QuietBoxes at our Boise, Idaho warehouse ready to ship same day or next day direct to your project. Custom boxes are available on request (large orders only).

### 3 Proven Performance

There are other solutions online for dealing with recessed lights and in-ceiling speakers. The only solution that will restore your lost mass is the QuietBox. Independently tested to show zero STC loss when installed around recessed lighting.
