

# TOTALMASS MLV BARRIER BY ISOSTORE

[MASS LOADED VINYL]

Mass loaded vinyl is one of the most trusted sound control products on the market today. Used in walls, ceilings, floors, doors, curtains, fences, and really anywhere that can use an acoustically dead material and more mass.

## GENERAL INFORMATION

Standard building materials like drywall or wood panels have a resonance point. This creates sound control issues at certain frequencies. This issue is exacerbated in assemblies that include multiple layers of the same building material, ie single layer or multiple layers of 1/2" drywall on each side of the wall. In comes mass loaded vinyl, an acoustically dead material that smooths out those significant dips in performance caused by resonance issues and adds to the sound control in most frequencies. Improvements of up to 10 STC points in standard assemblies.

This material is available in different sizes and weights made specifically for different applications. The standard is 1 LB, used successfully in almost any application. We also offer 1/2 LB, a lightweight and thinner version and 2 LB, a heavier duty and thicker version.

### 1 Quality Product

Our mass loaded vinyl is from a quality source that provides us with a consistent product regardless of weight and size. MLV is generally made in the same way, regardless of manufacturer, but the quality is not the same!

### 2 Readily Available

We keep massive inventory all over the country ready to ship same day or next day for quick delivery to our customers. Whether ordered direct from our website or Amazon listings, we have you covered to keep your project on schedule!

### 3 Best Pricing

We monitor online pricing to ensure we are the lowest price around. No games with prices to mislead customers on their cost. Low pricing for product and shipping plus quantity discounts and discounted shipping for larger orders!
